Didn't use replacement commands from Enhancer: only use those ones which not present in the OS itself, or you will end up with a mess.

We many times says to Mattew to not name programs the same name as they named in the OS, but he gives a fuck :) And anyway things reported to Enhancer components almost never fixed, exceptions only warp3dnova, radeonHD/RX drivers, ogles2, and the work done by Trixie and Andy. All the other stuff is written by other developers usually left as it, and no one fixes it for years.

So when you got Enhancer, be sure to just install necessary things manually, without using the installation script, and all will be fine (like step by step install only what you need: drivers, libs, and new 3d party classes and apps).

There already some replaced components working worse than in OS4 default ones, so just didn't use them.
