I have a 460ex with Radeon 6450 (AMD Sapphire). For sure you will need at least version 2.22 driver that comes with Enhancer Plus - the Radeon HD v1 driver 'worked' but did not take advantage of card features.

There is a compatibility list web page here <http://hdrlab.org.nz/projects/amiga-older-hardware-compatibility> and Hans answers emails if you have a unique question.

On my card VGA and DVI output worked but not HDMI, this is a common issue.
