Thanks to everone involved!

Installed directly above my existing OS4 Installation. No Problems so far!

Pretty nice that a detailed changelog has been included.

I can confirm that PartitionWizard and AmiDVD doesn't work anymore. I can't remember that i've ever used PartitionWizard. AmiDVD wasn't fully usable on X5000 because of SATA stuff and Device ID or something. So an updated Version of AmiDVD would be nice.

As for the ZZD10H Tools, at least SysMon and the CPU, RAM, GFX and Network Dockies are still working (all from latest AmiStore/Updater Release, so no Betas here).

@kas1e

Which Dockies do you mean from the ZZD10H Package?
