Just updated my AmigaOS4 Final Update1 with enhancer installed. One thing I noticed is my custom additions to the workbench context menus were gone. Had to copy the ContextMenu.cfg file from my back over to SYS:Prefs/Env-Archive directory.

Odyssey seems to be very unstable on amigans but I think that's more due to the animated snowflakes than the update. If I disable Javascript it's not as unstable.

@NinjaCyborg

I tried replicating some of the issue you mentioned you were having, at least as best I could from your description, and I didn't see any of the problems you were describing. If you could give some step by step instructions on how to reproduce the problem I could try again.

I'm running on an X1000.
