@nbache

Of course both approaches (manual and automatic) have their pros and cons. The reason I'm saying the automatic approach is more likely to happen is that Rave's plugin system is ready to adopt a piece of processing code, whereas the waveform display module is not ready for manual editing.

Quote:

I think SoX can do it too

Speaking of SoX... it would be interesting to see if libsox could be used as a processing engine (today, no-one writes their own DSP code anymore, you simply use one of the existing libraries). I'll see if I can coax anybody into porting it for me. Should be easier than porting the full SoX, especially as I don't need the I/O routines (sample loading/saving is already handled by Rave's sndio.module, which is based on libsndfile - port courtesy of Fredrik Wikstrom).
