Today I have borrowed Radeon HD7750. Plugged it in a third 33MHz slot-black screen, second 33MHz slot-black screen. R9250 was still in a first 66MHz slot. Then I have disconnected old Radeon and plugged HD7750 in the free slot.

UBoot showed up with no delay I mentioned before, almost immediately 😊 Progress bar went to the end - "loading done, now launching kickstart". Probably now I need a RadeonHd driver, right?
