The latest prefs/GUI and atiradeon.chip wasn't forgotten, they were not included for reasons (don't ask me which ones, I do not know, but point that they weren't forgotten).

The only small issue from your list is with 2 missing libs from MUI archive. If there will be a bug-fix release for update2, then they surely will be fit in (but IF there will be a bug-fix release, as I also do not know that)
