Sure, you can use pretty much any remote linux app in this way, just tried running firefox on my Raspberry Pi 4 and using the GUI from Amicygnix. See the result on my Sam460ex below.

I must say that you may obtain more usable result using a Remote Desktop connections (see rdesktop.lha on OS4Depot).

I see forwarding X11 apps to Amicygnix better for less demanding GUI apps, such as a text editor, or smaller apps that do not require refreshing the GUI too frequently.
