Updater locking up

Author: : Paul

URL:

When I click on Updater (whether in AMIdock or from actual program icon in window)the window opens and immediately the mouse freezes and I have to perform a case button reboot. This is whether I have started with the old kernel or the new one.

Do others find Updater to be as unstable as I have? I sure hope the promised "hot fix" for update 2 will be delivered by some other means than Updater, or I won't be able to get it!

Paul
