Sorry for a little offtopic, but still Amiga wifi related.

I use my Mac Mini as a way to get wifi on my X5000.

Just a x-connected lan cable between Mac/X5000 and setup up wifi Internet sharing on the Mac side.

"Cheap solution"(if you own a Mac) and it has worked great over the past 4 years!

And I use TwinVNC for accesing the Mac from AmigaOS.
