I was under the impression that the issue started after an upgrade to FE update 2 in combination with updater 53.65. Some user report that the issue is gone after an update to 53.7.

Apparently I am a unique case with the combination of 4.1 update 6 and updater 53.7. I also get a grimreaper instead of a freeze.

For what it is worth, the freeze of amishpere disappears when I disconnect the network cable. Maybe this helps into arrow down the root cause.

Grimreaper on Updater remains.
