What is also strange that this one also fails:

```
UASSERT(deSerializeString(is) == "foobar!");
```

While if i just do :

```
printf("test !! : %s\n",deSerializeString(is).c_str());
```

it prints me correctly "foobar!"

What do you get if print out deSerializeString(is).c_str() byte by byte? Something like

```
char *temp = deSerializeString(is).c_str();
const size_t l = strlen (temp);
size_t i;

for (i = 0; i < l; ++ i)
{
    printf ("temp [%lu] = '%c'\n", i, * (temp + i));
}
```
