My goal is have sames fonctions between MorphOS and AmigaOS4, if is possible

I have not worked on MorphOS, but basically they have common compatibility in AmigaOS3, but you can't or should not use AmigaOS3 functions, because newer or better stuff, you should use.

So you hide difference between OS's in macros, or you make wrapper's, and/or dummy functions for missing stuff, and you divide the code up in OS depended and none OS dependent code, and different makefiles. That's how I do it.
