Right...

@mdr

Then probably both ways to combine: hide volumes in prefs: workbench, and somewhere in user-startup add:

```
lock mos_volume1:
```

```
lock mos_volume2:
```

they will be hidden, and you can't write shit on.

I use "lock sys:" on some of my machines back in years when mess it too much with beta tests, and it quite handy to be sure nothing will be written/deleted from.
