System freeze when playing video files

Author: : derfs

URL:

I'm getting a full system freeze when playing video files and skipping around. No slow down, or frame skipping just a full system lock and I have no idea what's failing.

I have tried this with the Emotion player (demo and full version) and a few different Mplayers on os4depot.

Can someone see if they can replicate this? It's happening on the following file by moving the search bar towards the end of the file after it has started playing.

It doesn't help that as it's freezing I'm not getting any logs.

X5000

OS4.1up2+hotfix

Radeon 270 2Gb
