so much for talking about updater...

Sorry for contributing to hijacking the thread.

Updated also crashed on startup sometimes for me as well.

This is on a X1000 with AmgiaOS4 Final Update 2 and fully up to date Enhancer install using Updater version 53.70. Version 53.65 tends to work better but it can lock itself up in the middle of using it. In any case it sounds like the issues are known and a solution is being worked on.
