I don't know the subject well but as a buyer after an amigaos 4.1FE update2 + hotfix update I expect the whole Enhancer package to be updated accordingly because it has to be up to date with the operating system and not the other way around.

Sure it will probably take some time and normal but I expect this to be done.

Installing packages individually is a temporary solution.

Updating the package seems normal to me and needs to be adapted to the new update.
