I did not want to reinstall everything from the Enhancer Software package just to check to see if Updater was working. So I cherry-picked and installed AmiSphere, Updater, MultiEdit, Multiviewer and whatever gadgets and libraries I thought might be needed. I could not find a list of required stuff, so I guessed as best as I could and discovered a few more items as I progressed. I also downloaded the test version of listviewer.gadget using a link given to me by kas1e. Hopefully it was for the most recent test version of listviewer.gadget.

I purchased Enhancer Software v1.5 before the Enhancer Core was announced. I do not have the Enhancer Core package.
