I installed the Hotfix on Jan 12 and have rebooted and powered off and on many times (I power off my machine at night).

I did not install the Enhancer NotificationsServer but I do get some notifications from the old RinghioServer.

Just now, I downloaded AmiDVD

Last message is "Downloading updates data ...please wait"

Updater.log shows that The download was successful and it copied AmiDVD successfully.

Ranger shows a port called UPDATER.1 this port disappears after I click the close window (quit) gadget on the Updater window..

Cannot relaunch Updater but other programs launch ok, including web browsers.

I will install the Enhancer NotificationServer to see if that helps.

Edit to correct spelling mistakes
