Updater working fine now

Thank you so much for all your help. I really appreciate it.

As per your suggestion, I disabled RinghioServer in WBStartup and now Updater is working correctly.

When the problem was occuring ...

SYS:System/RinghioServer was enabled in WBStartup.

Ringhio 53.27 (31/03/2014) from the AmigaOS 4.1 Final Edition CD.

After disabling RinghioServer in WBStartup, Updater is working just fine and does not lock-up.

Thanks,
redfox

P.S. I disabled RinghioServer for awhile after I installed the original OS4.1 Final Edition Update 2. I was able to update some Enhancer stuff. Then I encountered some issues related to the OS4 kernal and started all over again with another clean install. I did not disable RinghioServer after that install because the Notification messages seemed to be working. But Updater was acting up and I had no clue that it was related to RinghioServer.

Again, thanks so much for your help Andy.
