Back in time, I had some strange freezes when I play videos on youtube in Odyssey. It also gives me out-of-sync with audio/video when moving the video slider. I was sure it's Odyssey's bugs, just to realize later that it was my CMI based sound card (and his driver?) that causes those issues.

Once got a "normal" SB Live card (thanks to Skateman) everything starts to be fine. No more freezes, no more issues.

So, SMF had a real valid point IMHO.
