I don't see support for an indeterminate state. Is this feature in a non-released version or did I miss something? How do you set it to an indeterminate state?

The TICKBOX_Indeterminate tag was implemented in tickbox.gadget 53.13. The example that shows this feature is SDK:Examples/GUI/TickBox/TriStateTickBox.c

I've checked and can see that the latest SDK files for the TickBox Gadget are included in Enhancer Software Core 1.1 (as well as in the current Enhancer 2.0 beta, but you might not have access to that). Older Enhancer installations may not have them, so if the files didn't get installed in your SDK: path, I suggest you download the Core from [the Amisphere website](#).
