About 2) when you say "item" you mean for example double click on a row?

Or how to retrieve column/data clicked?

search in listviewer examples:

```
...  
/// Get Node Data  
static void VARARGS68K GetNodeData( uint32 Pos, uint32 Column, ... )  
{...}
```

EDIT:

About 1)

```
static const uint32 lv_titletags[] =  
{  
/*LISTVIEWERN_ColumnNr, 0,  
LISTVIEWERN_Title_MinWidth, 100,*/  
  
LISTVIEWERN_ColumnNr, 1,  
LISTVIEWERN_Title_ShowDragBar, FALSE,  
  
TAG_END  
};
```

and add to listviewer object creation:

```
LISTVIEWER_TitleTags, &lv_titletags,
```

NOTA; all this are on listviewerX.c examples (maybe some aren't yet released or updated).
