If i remember right the one in SDK is 6.3, and the source code of it are there:

<https://sourceforge.net/p/adtools/code/HEAD/tree/trunk/gdb/>

If i remember right Sebastian didn't move gdb to the github page (or move, but then deleted), as there were hope for db101 debugger to be improved futher,etc, but so far that was too optimistic, and GDB is one we need for sure (as other ppls from whole worlds develop it, we only need to "port" ).

I buld that versoin via latest gcc 10.0.2, and it have exactly the same issue as have SDK's version.
