Ok, let's start from somewhere at least:

<https://github.com/kas1e/gdb>

Added what I describe above, and:

- added the elf32-amiga.c file done by Thomas/Sebastian for our older ports, fully commented out, needs some adaptation work, but at least now it continues to builds futher.
- fixed libreadline.a build

So for now it builds all necessary for gdb internal libs and stops on configuring GDB itself saying "**** Gdb does not support native target powerpc-unknown-amigaos" , checking how to fix that
