URL:

I haven't used aiostreams in a long time
I did a test and configured the video player in youtube.py and it works
then to see if it worked I used this shell command

```
python youtube.py -vs "winuae"  
python youtube.py -u <url> -q 18
```

and the program works correctly the video can be seen without any problem

so i set this in the odyssey menu:

PlayVideo link
c: rx Work: aiostreams / my_script.rexx% I

but if I try to open a video directly on the youtube page
it tells me "5/1 program not found"

the arexx odyssey script is set up like this:

to the line dedicated to youtube:

```
SELECT  
WHEN website = "Youtube" THEN address command '[PATH OF THE SCRIPT] YT.rexx' url 'ssl html odyssey  
autoplay silent'
```

i tried to enter this but it doesn't work:

```
WHEN website = "Youtube" THEN address command 'Work: aiostreams / youtube.py -ssl -u' url
```

what is the correct line to insert where am I wrong?

Thanks for any help.
