This is great, thanks Roman. I've checked out the repo and on Linux Mint 19.3, which is based on Ubuntu 18.04, and I am missing the termcap library which gives tgetent so I get to

```
checking for library containing waddstr... no
configure: WARNING: no enhanced curses library found; disabling TUI
checking for library containing tgetent... no
configure: error: no termcap library found
Makefile:8369: recipe for target 'configure-gdb' failed
make[1]: *** [configure-gdb] Error 1
make[1]: Leaving directory '/home/billy/Projects/amiga-gdb/gdb-7.5.1'
Makefile:843: recipe for target 'all' failed
make: *** [all] Error 2
```

Has your build got past this part? libncurses5-dev and readline-dev don't fix this for me so I'll download the termcap library from the GNU site and build and add it to this.
