Awesome work! I can get it to build too now, I had to slightly tweak it to get it see the termcap library, but that is just down to where people have put it. So I used

```
$ ./configure --host=ppc-amigaos --target=ppc-amigaos --build=x86_64 --disable-nls --disable-werror --disable-sim LDFLAGS="$LDFLAGS -L<the parent directory of libtermcap.a>"
```

I'll get on to my X1000 in the next couple of days and start testing it out and start working on the issues that you mentioned.
