- Because the Amiga port handles file paths in its own way (through ASL), perhaps you could also add icon tooltypes for the default module and sample paths for the ASL requester to pick up?

Currently requester code is not aware of sample/module/other at all, it simply stores paths like:

```
dict["dialog title"] = path
```

So there would have to be some kind of mapping from tooltype to dialog title for this mechanism to work.

MilkyTracker has a config file so ideally upstream could implement some path storage (maybe there is, didn't check it yet).
