Personal Paint on X5000 need 256x192 but No Such Option

Trying to find a purpose for my X5K... lol... and said, hey, I am working on a game for my Speccy... would be cool to use a Paint app on my X5K to create a .BMP and use it for my games boot screen.

Speccy needs 256x192 as the image size. I own Personal Paint that came with my X5K in 2016. Seems the smallest it allows me to get is 320x200. No luck.

Any options to create a nice image on my X5K at this point. Somehow get Personal Paint to allow this small size OR Sketchblock... is that something that can?

Thanks

TJ
