It adds -let and -lunix not at the end of linking line as expected, but at the beginning, before "-o gdb", so it didn't taken into account :(

```
make LOADLIBES="$LOADLIBES -lunix -lnet"
```

will do it.

Also we can use EXEEXT flag at the build stage and it will automatically put that at the end of the gdb program name e.g.

```
make LOADLIBES="$LOADLIBES -lunix -lnet" EXEEXT="-clib2"
```

will end up with an executable called gdb-clib2
