Ah yup 64 bit! So the debug print is now

```
(gdb) file helloworld
file helloworld
0 calling bfd_seek with Workspace:/helloworld with pos 0 (8) and direction 0 (4)
bfd_seek called with Workspace:/helloworld with pos 0 (8) and direction 0 (4)
BFD: BFD (GNU Binutils) 2.22.52.20120718 assertion fail ../../bfd/elf.c:241
bfd_seek called with Workspace:/helloworld with pos 0 (8) and direction 0 (4)
1: seeking Workspace:/helloworld with pos 12060 and direction 0 has result -1
4: seeking Workspace:/helloworld has error 29
returning Workspace:/helloworld : -1
"Workspace:/helloworld": not in executable format: Illegal seek
(gdb)
```

The numbers in the brackets after the pos and direction are the sizeof values to make sure I don't get caught out with that again 😊

So it's calculated the right position to scroll to for my executable but the subsequent seek to this position fails
