Ahaha, config.h of bfd of clib2 build:

Quote:

```
/* #undef HAVE_FSEEKO64 */
#define HAVE_FSEEKO 1
/* #undef HAVE_FTELLO64 */
#define HAVE_FTELLO 1
/* #undef HAVE_FOPEN64 */
#define HAVE_DECL_FSEEKO64 0
#define HAVE_DECL_FTELLO64 0
```

That kind of explains why it works on clib2: because on clib2 it didn't use those x64 functions, while on newlib we have them, and tried to use them, and fail. Meaning it's not clib2 there better, it's just clib2 didn't have those functions, while newlib have (through, they seem to have issues?) At least FTELLO64 and FSEEKO64?
