Hi,

I looked into writing scripts in python, to rewrite the little arexx script previously made, in python format, and add some enhancements also.

If you want to give it a try, you can download it [>here<](#).

It contains 2 py files (on is used for url recognition), and a drawer with small pngs pictures to display in the notification server.

Extract its content and copy the 2 scripts and the "icones" drawer in AIOStreams root one.

Set the context menu of your browser to call the script as:

```
Python {AIOStreams path}/AIOStream_browser_extension.py %l
```

Regards,

Petrol.
