Cheers Roman, great work again. `current_regcache` looks like an easy fix it's just setting it from `get_current_regcache ()`. I'm working my way through that and the warnings for `amigaos-nat.c` and will make a pull request for you when I'm done.

`BREAKPOINT_FROM_PC ()`, `amigaos_find_lib ()` and `amigaos_add_lib ()` are currently undefined, are they defined in the 6.3 branch anywhere?
