URL:

@kas1e I've submitted a pull request, see if it works for you. I'm getting weird issue that [https://github.com/kas1e/gdb/tree/81af ... 013839d99f854762f33b2c74c](https://github.com/kas1e/gdb/tree/81af...013839d99f854762f33b2c74c) allows me to do

file helloworld

and I get the illegal seeks

but all builds from [https://github.com/kas1e/gdb/tree/b880 ... 6e85518997b5be86053dce255](https://github.com/kas1e/gdb/tree/b880...6e85518997b5be86053dce255) onwards give me requester asking for

/usr/local/lib/debugWorkspace:

/usr/local/share/gdb/auto-loadWorkspace:

workspace: being the partition with helloworld on. The bits before workspace: are paths defined by bfd so at least I can see where they come from

The only thing changed between those two revisions are the "o64" undefs, etc.

Does it all work for you? hopefully it's some stupid setting on my system.
