@billyfish

That will help for sure. Can you made such a small test case ? (i just not very well understand issue, so can't myself). If Frederik in interest to deal with in newlib testcase will help.

+1

I tried putting together a simple test program using `fopen64()`, `fseeko64()` and `ftello64()` and it works just fine here (I also added code for reading some data to make sure that it's really at the correct file position).

Also I'm pretty sure I used `fseeko64()` in my ports of unrar and p7zip and I didn't have any problems there.

Apart from 64-bit vs 32-bit offsets there is little to no difference between the implementations of `fseeko64()` and `fseeko()/fseek()` functions.
