Wasn't there a separate threading model `-athread=pthreads` or similar for using posix threads? (single, native and pthreads?)

Yeah, there "single" and "native" for now. Also it has "pthread", but by default that file not compiled in (need `gthr-amigaos-pthread.o`, which can be build separately from `adtools` repo, but this one lack important functions implementations, so of no real use now, see: <https://github.com/sba1/adtools/issues/95>)

Quote:

There was nothing about pthreads in Sinan's linking errors, hence I don't understand why to link with pthreads?

Maybe he just copy+paste, or maybe some of those 3d party libs need pthreads, and errors he has only arisen after he link with them :)
