The catweasel cards are supposed to let you access Amiga classic floppies read/write. But you need a slot, etc.

Another option - external and USB based, but not transparent - would be to use the KryoFlux interface and a USB floppy drive.

<https://www.kryoflux.com/>

I can't say I have used either, but the KryoFlux is supposed to deal better with old source media, etc.

Please let us know how things work out.

Good luck,

PJS
