Do our SDL2.0.14 feature SDL_OpenUrl?

(It seems to have been introduced/implemented into 2.0.14 just lately, Feb 10, see

<https://github.com/libsdl-org/SDL/issues/1690>)

ScummVM also lately introduced support for it and now i'm getting undefined references on compiling.

Quote:

```
backends/platform/sdl/sdl.o: In function `OSystem_SDL::initBackend()':  
./backends/platform/sdl/sdl.h:58: undefined reference to `SDL_OpenURL'
```

Here is the ScummVM [PR](#)

Do you want me to open an issue in SDL2 or are you already on it?

Thank you
