Version 1.19:

- Add screenshot support.
- About: display RadeonHD/RX.chip version.
- Improve double-click toggling (reset timer on toggle).
- Use hard-coded alpha value of 1.0f.
- Refactor channel management internally.
- Treat project file location as a secondary path when looking for shaders.
- Work on audio support internally (not finished).
- Compiled with GCC 10 - thanks to all people working on the compiler!
