URL:

To those who already have the RadeonHD 3 driver package.  
Ignore the updates in the "System" tab of Updater.

Instead go to the "My purchases" tab.

Check the box in front of "Enhancer Software Release 2" and press download. Then install the package again.

It is a bit confusing because this package doesn't show up as updated. But this is the way to install Enhancer 2.0 with all it's new tools and libraries.
