Thanks to all who supplied the great info. Based on this info and my understanding of how things work (someone correct me if I'm wrong) I'm going to put the WarpDT descriptors in the DEVS:Datatype directory and leave the datatype classes from AK-Datatype, WarpDT datatype and OS4 Datatype in the SYS:Classes/Datatypes directory.

If my understanding is correct, this will then use the WarpDT datatypes for reading files and, using Multiviewer, I can select either AK Datatypes or OS4 Datatypes to save files.

The only question I still have left unanswered is: Is there a preferences program for the AK-Datatypes for OS4? I can't find one.
