Sapphire R9 290X - other users?

URL:

I am having some stability issues after update two and I am trying to sort out if this is hardware or software related.

I have an X5020 and I am using a Sapphire R9 290X 2GB graphics card.

So far it has worked fine but with update two some of the Warp3D/minigl games freezes when they are starting up.

Anybody else running a R9 290X card in their X5000?

The supported card lists on Hdrlabs is old <http://hdrlab.org.nz/projects/amiga-ompatibility/#Motherboards>

I am using the 3.7 RadeonHD driver and latest Warp3D and Minigl.

Thank you in advance! 😊
