Radeon R9 280X not working in "Power" Prefs with Enhancer 2

URL:

After installing Enhancer 2.0 i've found a firmware file for Tahiti GPUs (Radeon 79x0 and R9 280):

SYS:Firmware/radeon/TAHITI\_uvd.bin

I have a XFX R9 280X DD but unfortanally "Power" Prefs says: "No Dynamic Power Management Resource found for this board."

Someone here where it works with a Tahiti GPU?
