System doesn't have full memory coherence .

Wow.

Don't Think that that is supposed to happen on X5000 .

How many stick of memory do you have ?

This is from my Sam460ex which doesn't have full memory coherence. GART is turned off as expected .

RadeonRX (2): Identified the chipset as: POLARIS11

RadeonRX (2): Graphics card name is: Radeon RX Polaris11

RadeonRX (2): If - and only if - your card does not work or does not work optimally
please submit a bug report at:

<http://www.amiga.org/developer/bugreports>

Remember to include the driver version, and the following card details:

0x67FF:0x1043:0x04BE: <name of board>

and *please* describe the problems you are seeing in detail.

graphics.library PPC460ex optimizations enabled
