@SinanSam460

Which of my three crash reports? Or can you reproduce all three?

On a PC, the RX560 is on par with the R9 270 and a bit slower than the R9 270X. But according to some benchmarks done by Spectre666, this is not the case on Amigaos4. The RadeonRX driver provides clearly better results than the RadeonHD.

The RX560 manages to produce about twice the fps compared to the R9 270X in that particular test.
