@geennaam

I can reproduce the last one with RX550 and RX560.

I also have 8GB in my X5000.

"On a second attempt I increased the stacksize of Emotion from 32768 to 4000000.

Now the movie plays for a few seconds and then starts to stutter. Play again normally for a few seconds before it starts stuttering again. And finally I get ta similar crash as the others. A freeze, complete crash and a black screen. It seems like the complete video driver has crashed."
