Well done!! Thanks for the Video. 😊

I'll look into the sound prefs issue if I can reproduce that. I normally use the individual speaker buttons in order to test each individual channel.

But I did notice that between 3:02 and 3:16 the output volume was muted in Sound prefs. And in that case it is normal that you don't hear sound when you press the test sound button. Between 3:16 and 3:32, the output volume was set to 0.0dB. But there seems to be a lag of about two seconds before you can hear the beep the first time.

I do not know if sound prefs generates the sound or if it plays an audio file. In the first case I can imagine that this lag is caused by generating the 7.1 beep.
