The new connection wizard ask for P50x0eth 0 or 1 to set up. I've always had my cable plugged in to the port nearest the graphics card slot.

What are the port numbers for the ethernet port. . .

nearest the PCie graphics slot? _____

nearest the keyboard USB connector? _____

I can't find a diagram anywhere, and I've lost my ethernet connection. I need to start from scratch, but would like to solve this without taking the computer apart to find the silkscreened names.

Bummer! Most things were working quite nicely after Enhancer 2 was set up.
